

TanzaniteOne Limited said it has unearthed the third-largest high quality gemstone ever mined in the decade that it has been operating. The 12,100-carat tanzanite stone, weighing 2.42 kg, was discovered at the firm's main tanzanite project in the Simanjiro district of Tanzania. It is believed to be the third-largest tanzanite ever found, and the stone is undergoing analysis, including colour and clarity grading. The stone is likely to be cut into smaller, but nonetheless large stones, at the firm's own cutting facility at the TanzaniteOne mine site. [read more...](#)
